The workshop is a 6-day explores the phylogenetic diversity, relationships and the identification of samples from the Oregon State University Ichthyology collection. It covers identification based on available keys, comparison between systematic groups, comparative anatomy, interpretation of traits. The goal is to equip participants with a skill set in identification of ichthyoplankton to the lowest possible taxonomic level. Participants are encouraged to bring their own ichthyoplankton samples to the course to help with their identification.

*[Accommodation and travel costs are not included]
